

Database connection syntax and rules

- `LIB CONNECT TO 'connection name';`
 - Should precede every load statement requiring it
- Only one open connection at a time, during execution
- Connections should be Read-only
 - No Inserts, updates or deletes permitted

Source data extraction possibilities

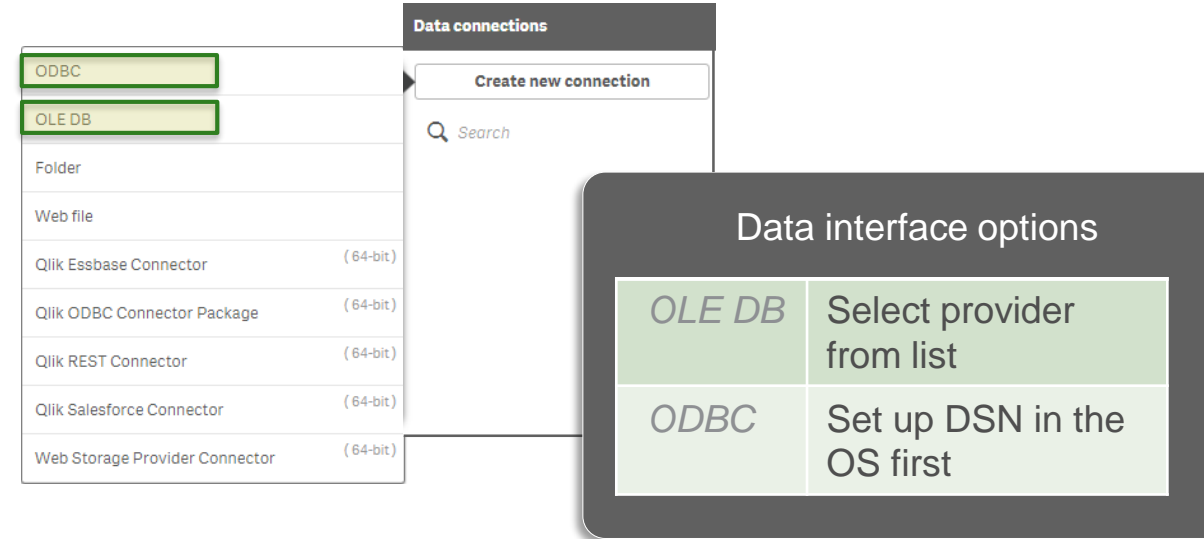

Data can be extracted from several types of database datasets:

- Physical table structures
- Logical views, representing a return of a tabular dataset
- Programming constructs:
 - Stored procedures which return a dataset
 - User-defined functions which return a dataset

Connection storage locations

The connections are stored as follows:

- Qlik Sense Desktop: in the .qvf file
- Qlik Sense Enterprise: in the Server repository

OLE DB	Select provider from list
ODBC	Set up DSN in the OS first
