Qlik

Data load editor

Use the *data load editor* option to load data and *directly* edit the data load script.
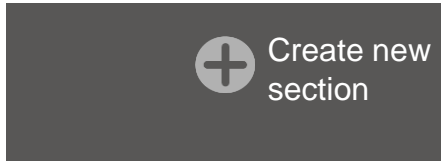

Show debug panel

Load data ▶

Show/hide Data connections panel

Create new section

☰ Main ✕

My section

Auto-generated section 🔒

Add data

🔓 Unlock

> If you unlock the auto-generated script, you will not be able to edit the data selection or data Profile with **Data manager**. *Unlocking cannot be undone.*

Output View the same information presented in the *Data load progress* dialog

🔍 Search and replace
opens a dialog, allowing you to search for specific text strings – optionally, you can search the current section or all sections, and you can apply a replace to the current section or all sections

// Comment / uncomment
select lines of the data load script to be treated as comments – may be used to add annotation to the script or convert functional lines of script to non-functioning lines of script (as a potential means to reactive the 'commented' script later)

⇥ Indent / Outdent
select lines of the data load script to change the indent level, in an effort to improve readability

❓ Syntax help mode
toggle into syntax help mode where all keywords are colored blue and underlined to serve as hyperlinks to the online help's description for that keyword – toggle out of syntax help mode in order to continue editing the script

↶ ↷ Undo / Redo
step forward or backward through recent editing steps you performed

Data connections

Create new connection

My connection ✕

🗎 Insert connection string
adds the connection string to script, at the point where the cursor is positioned

Select data
opens a dialog box, allowing you to browse and extract data from the connector source

✎ Edit connection
opens a dialog box, allowing you to edit data connection properties - such as name, source path, and connection credentials

Script editing aids:
- Color-coding syntax
- Popover help dialogs
- Auto-complete dialogs
